

MK Timekeeping & Compliance System

Project Documentation

An internal tool that replaces three legacy spreadsheets for tracking staff time, leave, and attendance compliance for the offshore team.

Prepared 29 July 2026

What this system does

Every employee logs their working hours day by day. The system automatically works out whether each day is Complete, Partial, or Missing, tracks approved leave and company holidays, and flags employees who fall short too often (a "strike"). Admins get a live dashboard, exportable Excel reports, and tools to manage the employee roster, leave requests, and support questions — all without touching a spreadsheet.

Everyone signs in through one login page. What they see next depends on their role: regular staff land in the Employee Zone to log their own time, while Admins land in the Admin Zone with oversight tools for the whole team. An Admin who is also an employee (e.g. a manager who logs their own hours) can switch over to the Employee Zone at any time using an "Employee login" link, and back again with "Admin Dashboard."

How people sign in

Employee Login — sign in with email and password. First-time users use **Sign up** to set a password themselves, using the email an admin already added to the roster.

Admin Login — a separate sign-in for admins. Only accounts marked as Admin in the roster can get in; the error message never reveals whether an email exists, to protect against account fishing. Repeated failed attempts (5) temporarily lock that account out.

Page-flow diagram: see the next page for a visual map of every page in the system.

Page flow

This map shows every page in the system and which zone it belongs to. Solid arrows show how pages are reached from the zone you land in after signing in.

Employee Zone

The five pages every regular employee uses day to day.

Today

Log the day's work and manage breaks.

- **Add a task row** — Log what you worked on — project/employer, task type, start and end time, and a short detail note.
- **Delete a row** — Remove a row you logged by mistake, as long as the day hasn't been submitted yet.
- **Start / End Break** — Track a Personal or Lunch/Dinner break with a live timer; time beyond the daily allowance automatically extends that day's target.
- **Submit Day** — Lock in your total hours once you're done for the day; totals are always computed from your rows, never typed by hand.
- **Pick a working date** — Log or review a recent day, not just today, within the admin-configured back-dating window.

My Month

A monthly overview of your own attendance.

- **Monthly calendar** — See your day-by-day status (Complete, Partial, Missing, Leave, Holiday, Weekend) at a glance.
- **Strike count** — See how many strikes you have this month and whether you're at or over the violation threshold.
- **Hours ledger** — See your running hours balance — how far ahead or behind target you are, day by day.

Leave

Request time off and track approval.

- **Request leave** — Ask for a full day or partial hours off, choose a leave type, and add a note ('Other' requires one).
- **Withdraw a request** — Cancel your own request yourself, as long as it's still pending.
- **View request history** — See every past request's status and any note your admin left when reviewing it.

Support

Ask an admin a question.

- **Ask a question** — Send a short message to the admin team when you're stuck or need help.
- **See the reply** — Track your question's status and read the admin's reply once it's answered.

Profile

Manage your own profile photo.

- **Upload photo** — Add or replace your profile picture (JPEG, PNG, or WebP, under 2 MB).

Admin Zone

Oversight, reporting, and management tools for admins.

Compliance Dashboard

The home screen for admins — a live, company-wide view.

- **Live KPI cards** — See at a glance who's logged today, who's on leave, and who hasn't logged in yet — click a card to see the names.
- **Department cards** — Click a department to drill into its day-by-day attendance and strikes for the month.
- **Monthly grid** — Every employee's daily status, color-coded, with a strike count and a violation flag per person.
- **Exceptions filter** — Narrow the grid down to only employees who have at least one strike this month.
- **Recompute month** — Force-refresh every status for the month from the latest submitted data.
- **Export XLSX** — Download the whole month's grid as an Excel file, laid out like the original legacy sheet.
- **Needs attention panel** — See pending leave requests, open support tickets, and employees in violation, all in one place.
- **Recent activity** — See the last few admin actions taken across the whole system.

Employee Detail

Opens when you click any employee's name from the Dashboard or Roster.

- **Day-by-day log** — See every day's status, hours, and variance for the month, plus that person's full task entries.
- **Override a day** — Manually change a day's status with a required reason — used sparingly, and always recorded in the audit log.
- **Unlock a day** — Reopen a submitted (locked) day so the employee can go back and fix a mistake.
- **Compensation links** — Link a shortfall day to surplus day(s) elsewhere; once fully covered, the shortfall no longer counts as a strike.
- **Export XLSX** — Download this person's full ledger, task entries, and leave history for the month.

Employees (Roster)

Manage the list of people in the system.

- **Add a person** — Create a new employee with name, department, designation, daily target hours, and workdays.
- **Edit a person** — Update anyone's details, or deactivate them — deactivating keeps their history but drops them from future compliance runs.
- **Bulk upload** — Onboard new hires, update existing people's details, or bulk-deactivate departing staff, all from one Excel upload.
- **Download templates** — Get a blank template for new hires, or an export of every current employee to edit and re-upload.
- **Reset password** — Clear an employee's password so they can run Sign-up again if they're locked out.
- **Search** — Quickly filter the employee list by typing a name.

Reports

Two report types (Attendance and Strikes) with the same filters.

- **Department filter** — Narrow the report to one department, or leave it on "All Departments."
- **Employee filter** — Narrow further to one specific person — becomes available once a department is chosen.
- **Date range filter** — Pick Last 7 days, Last month, Last 3 months, or set a custom date range.
- **Summary table** — See every matching employee's attendance percentage or strike count side by side.
- **Daily drill-down** — Pick one specific employee to see their day-by-day detail instead of a summary row.
- **Export XLSX** — Download whatever's currently on screen as an Excel file.

Leave Requests

Review and manage employee leave.

- **Approve / Reject** — Review a pending leave request and decide, optionally leaving a note for the employee.
- **Record leave directly** — Enter already-approved leave on someone's behalf — for example, a phoned-in sick day.
- **Recent records** — Search and review every leave record ever entered, with the option to delete one entered by mistake.

Projects & Tasks

Manage the dropdown lists employees pick from on Today.

- **Add project or task** — Create a new Project/Employer or Task entry for the dropdowns.
- **Activate / Deactivate** — Hide an old project or task from new entries without breaking historical rows that already reference it.

Settings

Tune the compliance rules for the whole company.

- **Compliance dials** — Set tolerance before a day counts as Partial, the monthly strike threshold, max single-row duration, back-dating window, gap-flag minutes, and minimum details length.
- **Break allowance** — Set the daily break allowance in minutes; time over this automatically extends that day's target.
- **Compensation rule** — Choose whether a fully compensated shortfall erases the strike, or keeps it on record.
- **Live-computation start date** — Set the cutoff date before which imported legacy history stays frozen and is never recalculated.
- **Company holidays** — Add or remove holiday dates that apply company-wide.

Audit Logs

A read-only accountability trail.

- **Full action history** — See a timestamped record of every admin action — who did what, and when. Nothing here can be edited or deleted.

Support Inbox

Answer employee questions.

- **View open questions** — See every employee support question that's still waiting for a reply.
- **Reply & resolve** — Answer a question and mark it resolved; the employee sees your reply on their own Support page.

This document reflects the system as of the date above and will need updating as features are added.
